## Abstracts

Sewage treatment is the process of removing contaminants from wastewater, primarily from household sewage. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safer for the environment. A by-product of sewage treatment is usually a semi-solid waste or slurry, called sewage sludge. The sludge has to undergo further treatment before being suitable for disposal or application to land.

This report elaborates the market size, market characteristics, and market growth of the Sewage Treatment Equipment industry, and breaks down according to the type, application, and consumption area of Sewage Treatment Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Sewage Treatment Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
