Abstracts

Ship loader is a port material handling equipment used for bulk material loading application. The growth in the bulk cargo transportation and the mining industries exploration activities drive the demand for ship loaders. Most common dry bulk materials such as coal, iron ore, grains, fertilizers, and any powder or granular dry cargo material use ship loaders for loading application during exporting bulk goods. All ship loaders designs have loading boom configurations, which can make a slewing and luffing motion to load the ship hold and adjust with the vessel position with the water elevation and ship size.

This report elaborates the market size, market characteristics, and market growth of the Ship Loaders industry, and breaks down according to the type, application, and consumption area of Ship Loaders. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Ship Loaders in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
