Abstracts

A silicon controlled rectifier or semiconductor controlled rectifier is a four-layer solid-state current-controlling device. SCRs can be triggered normally only by currents going into the gate as opposed to TRIACs, which can be triggered normally by either a positive or a negative current applied to its gate electrode.

This report elaborates the market size, market characteristics, and market growth of the Silicon Controlled Rectifier (Scr) industry, and breaks down according to the type, application, and consumption area of Silicon Controlled Rectifier (Scr). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
