## **Abstracts**

Silicones, also known as polysiloxanes, are polymeric synthetic materials which are formulated from inorganic-organic monomers. They are bonded through hydrogen and carbon atoms and are usually rubber-like and heat resistant. Silicones are increasingly being used in various applications due to their ideal properties such as resistance to ozone and UV light, low chemical reactivity, non-stickiness, light weight, high permeability for gases, thermal stability, etc.

This report elaborates the market size, market characteristics, and market growth of the Silicone industry, and breaks down according to the type, application, and consumption area of Silicone. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Silicone in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
