Abstracts

The single frequency laser, that is, the single longitudinal mode laser, is characterized in that the output laser mode satisfies both the single transverse mode and the single longitudinal mode, and only a single longitudinal mode is oscillated inside the cavity, and the output light intensity exhibits a Gaussian distribution. In addition to the good monochromaticity and directionality of the laser itself, single-frequency lasers have the characteristics of long coherence length and narrow spectral line width that are difficult to achieve with ordinary lasers. It has a wide range of applications in the fields of laser radar, laser ranging, laser remote sensing, laser medical, spectroscopy, optical frequency standards and nonlinear optical frequency conversion.

This report elaborates the market size, market characteristics, and market growth of the Single Frequency Lasers industry, and breaks down according to the type, application, and consumption area of Single Frequency Lasers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Single Frequency Lasers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
