Abstracts

Single-wall carbon nanotubes (SWNTs) are a special class of carbon materials known as one-dimensional materials. They consist of sheets of graphene, rolled up to form hollow tubes with walls one atom thick. Due to its chemical structure and dimensional constraints, this material exhibits exceptional mechanical, electrical, thermal, and optical properties. As such, carbon nanotubes have become of great interest for both stand-alone studies and for use in composite materials.

This report elaborates the market size, market characteristics, and market growth of the Single-Walled Carbon Nanotubes industry, and breaks down according to the type, application, and consumption area of Single-Walled Carbon Nanotubes. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Single-Walled Carbon Nanotubes in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
