Abstracts

Wind power is the use of air flow through wind turbines to provide the mechanical power to turn electric generators. Wind power, as an alternative to burning fossil fuels, is plentiful, renewable, widely distributed, clean, produces no greenhouse gas emissions during operation, consumes no water, and uses little land.[2] The net effects on the environment are far less problematic than those of nonrenewable power sources. This report elaborates the market size, market characteristics, and market growth of the Small And Medium Wind Power industry, and breaks down according to the type, application, and consumption area of Small And Medium Wind Power. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Small And Medium Wind Power in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
