Abstracts

A dock fender is a bumper used to absorb the kinetic energy of a boat or vessel berthing against a jetty, quay wall or other vessel. Fenders, used on all types of vessels, from cargo ships to cruise ships, ferries and personal yachts, prevent damage to vessels and berthing structures. To do this, fenders have high energy absorption and low reaction force. Fenders are typically manufactured out of rubber, foam elastomer or plastic. Small-scale dock fender is the kind of dock fender whose length is below 80 inches.

This report elaborates the market size, market characteristics, and market growth of the Small-scale Marine Beacon Dock Fender industry, and breaks down according to the type, application, and consumption area of Small-scale Marine Beacon Dock Fender.
