Abstracts

A smart tracker is a device that functions on Bluetooth, GPS, and cellular technology. The device is paired with an app on the smartphone and is used to find or locate missing items. This gap in the market has been fulfilled by smart trackers, which are miniaturized devices working on Bluetooth or GPS technology to locate items that have been misplaced. This device also notifies an individual if he or she leaves behind any item. Geo-fencing technology is used to provide alerts to the individual, notifying them when they get too far from their belongings so that these items can be retrieved before it is too late.

This report elaborates the market size, market characteristics, and market growth of the Smart Tracker industry, and breaks down according to the type, application, and consumption area of Smart Tracker. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Smart Tracker in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
