Abstracts

A Smart Water Network is the collection of data-driven components helping to operate the data-less physical layer of pipes, pumps, reservoirs and valves. Water utilities are gradually deploying more data-enabled components. It’s up to users to make the most out of them, by turning the discrete elements into a cohesive ‘overlay network’.
This report elaborates the market size, market characteristics, and market growth of the Smart Water Networks industry, and breaks down according to the type, application, and consumption area of Smart Water Networks. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Smart Water Networks in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
