Abstracts

Solar canopies are elevated structures that host solar panels and provide shade. These overhead solar panel installations are typically installed in parking lots or other paved areas.

In practice, solar canopies are similar to solar carports and ground mounted solar panels – each provides an alternative to rooftop solar, whether because a roof can't host solar panels or because a property's electricity needs are too large for a rooftop solar system. Many solar parking lots also incorporate electric car charging stations so that drivers of electric vehicles can recharge with solar power while parked.

This report elaborates the market size, market characteristics, and market growth of the Solar Canopy Carport industry, and breaks down according to the type, application, and consumption area of Solar Canopy Carport. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Solar Canopy Carport in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
