Abstracts

A solar pump is a pump running on electricity generated by photovoltaic panels or the radiated thermal energy available from collected sunlight as opposed to grid electricity or diesel run water pumps. The operation of solar powered pumps is more economical mainly due to the lower operation and maintenance costs and has less environmental impact than pumps powered by an internal combustion engine (ICE).

This report elaborates the market size, market characteristics, and market growth of the Solar Pump industry, and breaks down according to the type, application, and consumption area of Solar Pump. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Solar Pump in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
