Abstracts

Solder ball, also a solder bump (often referred to simply as 'ball' or 'bumps') is a ball of solder that provides the contact between the chip package and the printed circuit board, as well as between stacked packages in multichip modules. The solder balls can be placed manually or by automated equipment, and are held in place with a tacky flux. This report elaborates the market size, market characteristics, and market growth of the Solder Ball industry, and breaks down according to the type, application, and consumption area of Solder Ball. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
