Abstracts

LiDAR is used alongside other sensors such as cameras and RADAR for mapping, object detection and identification, and navigation without relying on lighting conditions. Solid state LiDAR is a system built entirely on a silicon chip. No moving parts are involved, which not only makes more resilient to vibrations, but can be made smaller much more easily. This lends to production being cheaper.

This report elaborates the market size, market characteristics, and market growth of the Solid-State LiDAR industry, and breaks down according to the type, application, and consumption area of Solid-State LiDAR. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Solid-State LiDAR in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
