Abstracts

Solid tires, which are also called airless tires, are manufactured using a few different methods. Solid tires can be manufactured on a frame or metal wheel structure which will then be mounted on a specific vehicle. Solid tires can also be made to fit on rims that are manufactured to support pneumatic tires. Solid tires differ in two ways. The first is the rubber compounds they're made with, and the second is the purposes they're made for. Solid-tire manufacturing results in tires that are incredibly hard and durable, bearing a slick tread design. Solid tires are also pliable and capable of performance at high speeds. These tires can even possess modern tread design and capability.

This report elaborates the market size, market characteristics, and market growth of the Solid Tires industry, and breaks down according to the type, application, and consumption area of Solid Tires. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Solid Tires in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
