Abstracts

Peptides are synthesized by coupling the carboxyl group of one amino acid to the amino group of another amino acid molecule. Due to the possibility of unintended reactions, protecting groups are common necessary. Chemical peptide synthesis most commonly starts at the carboxyl end of the peptide, and thus progress toward the amino-terminus. This is the opposite direction of protein biosynthesis.

This report elaborates the market size, market characteristics, and market growth of the Solution Phase Peptide Synthesis industry, and breaks down according to the type, application, and consumption area of Solution Phase Peptide Synthesis. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
