Abstracts

In the maintenance and repair of machining, machinery and automobiles, diesel, kerosene or gasoline is often used as a cleaning fluid to clean parts. This not only wastes energy, but also has potential insecurities. If it is not careful, it may cause a fire. In recent years, a new type of metal cleaning agent has been widely used. It can replace diesel, kerosene and gasoline to clean parts. It is cheap and safe to use, and is very suitable for mechanized cleaning operations. It can be washed with metal without rust, which is called a metal cleaner.

This report elaborates the market size, market characteristics, and market growth of the Solvents Metal Cleaning Chemicals industry, and breaks down according to the type, application, and consumption area of Solvents Metal Cleaning Chemicals. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
