Abstracts

Space mining refers to the mining of asteroids and other minor planets for their valuable raw materials. Space technology is anticipated to enable the exploitation of the rich resources of the asteroids in the solar system and it is being developed by a variety of companies leading to the enlarged scope of the business over the coming years. Space mining is an exciting prospect for more than one reason. The obvious reason is that the terrestrial mining industry has many limitations, owing to the finite nature of the Earth's resources.

This report elaborates the market size, market characteristics, and market growth of the Space Mining industry, and breaks down according to the type, application, and consumption area of Space Mining. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Space Mining in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
