## Abstracts

The polylactic acid is the biodegradable material manufactured from biodegradable substances like sugarcane, tapioca roots, starch and other materials. The environmental safety challenges provoked packaging producers and scientists to partially substitute petrochemical based polymers with biodegradable ones. Polylactic acid is manufactured using different methods and stages like modifiers, blending, physical treatments and copolymerizing. The main quality of polylactic acid is its strong bonding nature, antimicrobial and antioxidant characteristics.

This report elaborates the market size, market characteristics, and market growth of the Specific Polylactic Acid (PLA) industry, and breaks down according to the type, application, and consumption area of Specific Polylactic Acid (PLA). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
