## Abstracts

Sperm analysis system applies modern computer technology and advanced image analysis techniques to the clinical testing of sperm quality. The sperm analysis software is based on the WHO semen test standard. The semen sample is amplified by a microscope based on the semen test standard, and then the dynamic and static images of the sperm are input into the computer through the image dynamic acquisition system, and the density of the sperm is advanced by using computer technology. Dozens of inspection items such as vitality, activity rate, and trajectory of the movement are subjected to automated qualitative and quantitative detection and analysis, making the test results more professional, scientific, objective and comparable.

This report elaborates the market size, market characteristics, and market growth of the Sperm Analysis System industry, and breaks down according to the type, application, and consumption area of Sperm Analysis System.
