Abstracts

Spill Containment is where chemicals, oil, sewage, and the like are contained within a barrier or drainage system rather than being absorbed at the surface. One method is to use an inflatable plug or pneumatic bladder that is inserted into the flow outlet of the drainage system to form a containment. In the event of an overflow, the plug airbag expands to block the drain and prevent spilled chemicals from entering the groundwater, stream or river.
This report elaborates the market size, market characteristics, and market growth of the Spill Containment industry, and breaks down according to the type, application, and consumption area of Spill Containment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Spill Containment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
