Abstracts

Laminoplasty is another type of spinal surgery used to “decompress” or lessen pressure surrounding the spinal canal and nerve structures. Laminoplasty is a surgical procedure where a portion of the lamina bone is carefully cut all the way through. By carefully cutting through one aspect of the lamina, it is similar to opening a door to create more space around the spinal canal.

This report elaborates the market size, market characteristics, and market growth of the Spinal Laminoplasty industry, and breaks down according to the type, application, and consumption area of Spinal Laminoplasty. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Spinal Laminoplasty in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
