Abstracts

The spinal augmentation system is a medical device for performing minimally invasive surgery of the vertebrae. Surgery performed by the spinal pressurization system is used for pain management due to vertebral compression fractures. The primary function of the spinal augmentation system is to create a cavity in the vertebral body prior to injection of bone cement during minimally invasive surgery. Bone cement is injected into the cavity created by the spinal augmentation system to stabilize the fracture. The spinal augmentation system is used to perform different types of surgical procedures, such as vertebroplasty, balloon kyphoplasty, and the like.

This report elaborates the market size, market characteristics, and market growth of the Spine Augmentation Systems industry, and breaks down according to the type, application, and consumption area of Spine Augmentation Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Spine Augmentation Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
