## **Abstracts**

Robotic spot welding, a type of resistance welding, is the most common welding application found in the manufacturing field. Spot welding robots are used to carry the spot welding operation in end-user industries. These robots deploy copper alloys for transmitting electric current to the welding point and contain a spot welding gun at the terminal point of the robot wrist, which is in place instead of an end-effector.

This report elaborates the market size, market characteristics, and market growth of the Spot Welding Robot industry, and breaks down according to the type, application, and consumption area of Spot Welding Robot. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
