## **Abstracts**

In spray dryers, the material to be dried is atomized into small particles and dried by bringing it in contact with the heating medium and the dried product is obtained in the form of dry granular powder. Spray dryer operation generally consists of three main parts -- atomization, contacting with the heating medium and collection of product. Spray dryers are used where functional and nutritional value of the material and drying of heat sensitive materials is of primary concern, such as in the food and pharmaceutical industry. Spray dryers are used for a variety of industrial products, such as milk powder, cereals, antibiotics, vitamins, paint pigments, catalyst support, ceramics, etc. and thus, there has been significant demand for spray dryers from food & beverage, pharmaceutical and chemicals, among other industries.

This report elaborates the market size, market characteristics, and market growth of the Spray Dryer industry, and breaks down according to the type, application, and consumption area of Spray Dryer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
