## Abstracts

The shotcrete/sprayed concrete is a special type of concrete, which with the help of a sealed and pressure-resistant hose is projected at a high velocity on the surface of the construction. Using water, the concrete mix is hydrated and is blown onto the substrate using a spraying nozzle. Compared to conventional concretes, the shotcrete/sprayed concrete has additional benefits, that is, they give high mechanical strength to the construction with long durability. The shotcrete/sprayed concrete has dense compaction and high compressive strength due to the low ratio of water and cement.

This report elaborates the market size, market characteristics, and market growth of the Sprayed Concrete industry, and breaks down according to the type, application, and consumption area of Sprayed Concrete. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Sprayed Concrete in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
