Abstracts

STS – Static Transfer Switch are automatic static switching equipments designed to transfer electric loads between two independent AC power sources without interruption. The static transfer switch (STS) is an electrical device that allows instantaneous transfer of power sources to the load. This superior switching time means that if one power source fails the STS switches to the back-up power source so quickly that the load never recognizes the transfer made.

This report elaborates the market size, market characteristics, and market growth of the Static Transfer Switches (STS) industry, and breaks down according to the type, application, and consumption area of Static Transfer Switches (STS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Static Transfer Switches (STS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
