## Abstracts

Steel Structure is a category of steel used for making construction materials in a variety of shapes. Many structural steel shapes take the form of an elongated beam having a profile of a specific cross section. Structural steel shapes, sizes, chemical composition, mechanical properties such as strengths, storage practices, etc., are regulated by standards in most industrialized countries.

This report elaborates the market size, market characteristics, and market growth of the Steel Structure industry, and breaks down according to the type, application, and consumption area of Steel Structure. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
