Abstracts

A stepper motor, also known as a step motor or stepping motor. A stepper motor is a type of DC motor that works in discrete steps. It is a synchronous brushless motor where a full rotation is divided into a number of steps. The two main components of a stepper motor are the rotor and the stator. The rotor is the rotating shaft and the stator consists of electromagnets that form the stationary part of the motor.

This report elaborates the market size, market characteristics, and market growth of the Stepper Motor industry, and breaks down according to the type, application, and consumption area of Stepper Motor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Stepper Motor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
