Abstracts

Storage resource management (SRM) is a proactive approach to optimizing the efficiency and speed with which available drive space is utilized in a storage area network (SAN). SRM software can help a storage administrator automate data backup, data recovery and SAN performance analysis. The software can also help the administrator with configuration management and performance monitoring, forecast future storage needs more accurately and understand where and how to use tiered storage, storage pools and thin provisioning.

This report elaborates the market size, market characteristics, and market growth of the Storage Resource Management industry, and breaks down according to the type, application, and consumption area of Storage Resource Management. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Storage Resource Management in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
