Abstracts

International financial transactions are based on several financing philosophies, whose application is affected by the course of economic growth and development within an individual national economy. This is demonstrated by the evolution of the financing technique known as International structured trade & commodity finance (STCF).

STCF is 'cross-border trade finance in emerging markets where the intention is to get repaid by the liquidation of a flow of commodities.' Structured commodity finance (SCF) is a sophisticated commodity-based financing technique, specifically designed for commodity producers and trading companies doing business in the developing markets. Introduced in the early 1990s, SCF continues to play an important role, providing liquidity management and risk mitigation for the production, purchase and sale of raw, semi-refined or semiprocessed materials.

This report elaborates the market size, market characteristics, and market growth of the Structured Commodity and Trade Finance industry, and breaks down according to the type, application, and consumption area of Structured Commodity and Trade Finance. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Structured Commodity and Trade Finance in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
