Abstracts

Stud welding is a powerful and reliable welding process for applying a single side fastener to a metal component, including stainless steel, mild steel, aluminium, aluminium alloy, and brass components. There are three main stud welding processes: capacitor discharge (CD), drawn arc (DA), and short cycle (SC). Each process is suited to particular materials and provides various capabilities, but all of these processes produce impressively strong and lasting results. Stud welding can be used for a diverse range of industries, from electrical and mechanical to decorative and consumer.

This report elaborates the market size, market characteristics, and market growth of the Stud Welding Gun industry, and breaks down according to the type, application, and consumption area of Stud Welding Gun. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Stud Welding Gun in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
