Abstracts

Styrene-Acrylonitrile (SAN) is a colorless and transparent thermoplastic resin with high temperature resistance, excellent gloss and chemical resistance, as well as excellent hardness, rigidity, dimensional stability and high load carrying capacity. Nitrile and styrene are obtained by suspension polymerization of a raw material, and may be initiated by a thermal initiator, or may be obtained by an emulsion polymerization method, and are used for producing a transparent plastic product because of the inherent transparency of the resin.

This report elaborates the market size, market characteristics, and market growth of the Styrene-Acrylonitrile (SAN) industry, and breaks down according to the type, application, and consumption area of Styrene-Acrylonitrile (SAN). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
