Abstracts

Super-resolution microscopy, in light microscopy, is a term that gathers several techniques, which allow images to be taken with a higher resolution than the one imposed by the diffraction limit. Due to the diffraction of light, the resolution in conventional light microscopy is limited, as stated by Ernst Abbe in 1873.

This report elaborates the market size, market characteristics, and market growth of the Super-Resolution Microscope industry, and breaks down according to the type, application, and consumption area of Super-Resolution Microscope. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Super-Resolution Microscope in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
