## Abstracts

The process of converting a monomeric molecule together in a chemical reaction to form a polymer chain is referred to as polymerization. Superabsorbent polymers are three-dimensional network forms formed by chemical cross-linking or physical cross-linking of a large number of molecules consisting of certain repeating units. The superabsorbent polymer has capability to absorb a liquid. This absorbency and capacity of polymer depends on the degree of cross-linking.

This report elaborates the market size, market characteristics, and market growth of the Superabsorbent Polymers industry, and breaks down according to the type, application, and consumption area of Superabsorbent Polymers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Superabsorbent Polymers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
