Abstracts

Supervisory Control and Data Acquisition (SCADA) is a software application which is used for process control. In other word, it is a control system which consists of components such as controller network interfaces, software communication equipment, and input/output. SCADA is a centralized system which monitors the entire area and allows operators to change the set point for flow and enable alarm in case of emergency conditions such as increase in temperature or change in the rate of flow.

This report elaborates the market size, market characteristics, and market growth of the Supervisory Control And Data Acquisition (Scada) industry, and breaks down according to the type, application, and consumption area of Supervisory Control And Data Acquisition (Scada). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Supervisory Control And Data Acquisition (Scada) in a special period.
