## Abstracts

Surface protection films are plastic flexible films that have self-adhesive and self-adhering properties. The design of surface protection films consists of a polymer based substrate layer coated with adhesive layer. Surface protection films render longevity to products and are a cost-effective way to preserve expensive products. Surface protection films are resistant to permeation of environmental elements such as chemicals, surface eroding gaseous substances, etc. Design and technology advancements in surface protection films allow surface protection films to provide resistance against flame and extreme temperatures.

This report elaborates the market size, market characteristics, and market growth of the Surface Protection Films industry, and breaks down according to the type, application, and consumption area of Surface Protection Films. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
