Abstracts

A system in package (SiP) or system-in-a-package is a number of integrated circuits enclosed in a single chip carrier package. The SiP performs all or most of the functions of an electronic system, and is typically used inside a mobile phone, digital music player, etc.[1] Dies containing integrated circuits may be stacked vertically on a substrate. They are internally connected by fine wires that are bonded to the package.

This report elaborates the market size, market characteristics, and market growth of the System in Package (SiP) Technology industry, and breaks down according to the type, application, and consumption area of System in Package (SiP) Technology. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
