Abstracts

System integration is defined in engineering as the process of bringing together the component sub-systems into one system (an aggregation of subsystems cooperating so that the system is able to deliver the overarching functionality) and ensuring that the subsystems function together as a system, and in information technology as the process of linking together different computing systems and software applications physically or functionally, to act as a coordinated whole.

This report elaborates the market size, market characteristics, and market growth of the System Integration industry, and breaks down according to the type, application, and consumption area of System Integration.
