Abstracts

Teleoperation represents the ability to operate equipment or a machine from a distance. A specific form of teleoperation involving remote control of a robot from a distance is referred to as telerobotics. Teleoperation and telerobotics are both supported by ICT infrastructure including broadband communications, sensors, machine to machine (M2M) communications, and various Internet of Things (IoT) technologies. Enhancements in wireless broadband are untethering teleoperation. Prior to 5G and Mobile Edge Computing (MEC), Teleoperation is largely relegated to fixed communications connections. 5G and MEC will enable Teleoperation anywhere there is 5G coverage, enabling many new consumer and industrial automation scenarios involving robotics.

This report elaborates the market size, market characteristics, and market growth of the Teleoperation and Telerobotics in Industrial Internet of Things (IIoT) industry, and breaks down according to the type, application, and consumption area of Teleoperation and Telerobotics in Industrial Internet of Things (IIoT). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Teleoperation and Telerobotics in Industrial Internet of Things (IIoT) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19. In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
