Abstracts

The term tethered drones refers to drones that are equipped with a tether station that doubles as a power supply for the drone to maintain aerial stability. These tethered drone systems are fully automated from take-off to landing and provide continuous aerial coverage over large areas for law enforcement, public safety, private security, military uses, and crisis monitoring.

This report elaborates the market size, market characteristics, and market growth of the Tethered Drones industry, and breaks down according to the type, application, and consumption area of Tethered Drones. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
