Abstracts

Textile printing is the process of applying colour to fabric in definite patterns or designs. In properly printed fabrics the colour is bonded with the fibre, so as to resist washing and friction. Textile printing is related to dyeing but in dyeing properly the whole fabric is uniformly covered with one colour, whereas in printing one or more colours are applied to it in certain parts only, and in sharply defined patterns.

This report elaborates the market size, market characteristics, and market growth of the Textile Printing Machine industry, and breaks down according to the type, application, and consumption area of Textile Printing Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
