Abstracts

A thermal power station is a power station in which heat energy is converted to electric power. In most of the places in the world the turbine is steam-driven. Water is heated, turns into steam and spins a steam turbine which drives an electrical generator. After it passes through the turbine, the steam is condensed in a condenser and recycled to where it was heated

This report elaborates the market size, market characteristics, and market growth of the Thermal power industry, and breaks down according to the type, application, and consumption area of Thermal power. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Thermal power in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
