Abstracts

A thermoelectric (TE) module, also called a thermoelectric cooler or Peltier cooler, is a semiconductor-based electronic component that functions as a small heat pump, moving heat from one side of the device to the other. Thermoelectric modules are also sometimes used to generate electricity by using a temperature differential between the two sides of the module.

This report elaborates the market size, market characteristics, and market growth of the Thermoelectric Modules industry, and breaks down according to the type, application, and consumption area of Thermoelectric Modules. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Thermoelectric Modules in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
