Abstracts

Due to the presence of blackbody radiation, any object radiates electromagnetic waves depending on the temperature. The part with a wavelength of 2.0 to 1000 microns is called thermal infrared. Thermal infrared imaging can reflect the temperature field of the surface of the object by imaging the object with a thermal infrared sensitive CCD. Thermal infrared has a wide range of applications in military, industrial, automotive assisted driving, and medical fields. Thermography Software offers an expanded set of sophisticated controls for generating more comprehensive thermal imaging inspections and research reports. Record and play back radiation video files and time/temperature maps, etc.
This report elaborates the market size, market characteristics, and market growth of the Thermography Software industry, and breaks down according to the type, application, and consumption area of Thermography Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Thermography Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
