## **Abstracts**

Thrombolysis, also called fibrinolytic therapy, is the breakdown of blood clots formed in blood vessels, using medication. It is used in ST elevation myocardial infarction, stroke, and very large pulmonary embolisms. The main complication is bleeding, and in some situations thrombolysis may therefore be unsuitable.

This report elaborates the market size, market characteristics, and market growth of the Thrombolysis industry, and breaks down according to the type, application, and consumption area of Thrombolysis. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Thrombolysis in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
