Abstracts

Thymosin α 1 is a peptide fragment derived from prothymosin alpha, a protein that in humans is encoded by the PTMA gene.

It was the first of the peptides from Thymosin Fraction 5 to be completely sequenced and synthesized. Unlike β thymosins, to which it is genetically and chemically unrelated, thymosin α 1 is produced as a 28-amino acid fragment, from a longer, 113-amino acid precursor, prothymosin α .

This report elaborates the market size, market characteristics, and market growth of the Thymosin Alpha-1 industry, and breaks down according to the type, application, and consumption area of Thymosin Alpha-1. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Thymosin Alpha-1 in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
