Abstracts

Tissue valves are most often made with tissues from porcine (pig) heart valves or bovine (cow) cardiac tissue. When you have a tissue heart valve, you do not need to take lifelong blood-thinner medication (unless you have another condition that makes this medication necessary).

Tissue valves are not as durable as mechanical valves. Clinical studies show that tissue heart valves may last from eight to 20 years, depending on their position.^{1,2} (In these studies, aortic valves have tended to last longer than mitral valves.) How long the valve lasts depends on the type of tissue valve, your age, lifestyle, medication requirements and other factors.

This report elaborates the market size, market characteristics, and market growth of the Tissue Heart Valves industry, and breaks down according to the type, application, and consumption area of Tissue Heart Valves. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Tissue Heart Valves in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
