Abstracts

The purpose of tokenization is to swap out sensitive data—typically payment card or bank account numbers—with a randomized number in the same format, but with no intrinsic value of its own. This differs from encryption where a number is mathematically changed, but its original pattern is still “locked” within the new code—known as Format Preserving Encryption. Encrypted numbers can be decrypted with the appropriate key—whether through brute computing force, or through a hacked/stolen key. Tokenization is the process of removing sensitive data from your business systems by replacing them with an undecipherable token, so that it can store the original data in a secure cloud data vault.

This report elaborates the market size, market characteristics, and market growth of the Tokenization Solution industry, and breaks down according to the type, application, and consumption area of Tokenization Solution. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Tokenization Solution in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
