Abstracts

The topical skin adhesives (or glues) are liquid cyanoacrylate monomers that polymerize into long solid chains upon contact with blood or a wound surface, thus holding wound edges together. Topical skin adhesives are ideal for simple cuts such as punctures from minimally invasive surgery (e.g. hair transplantation), skin graft sites, and simple trauma-induced lacerations.

This report elaborates the market size, market characteristics, and market growth of the Topical Skin Adhesives industry, and breaks down according to the type, application, and consumption area of Topical Skin Adhesives. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
